Examiner Note: You must sign this form unless it is an Attachment to a signed Office action.	E:	xaminer's signa	ture, if required	<del></del>

Continuation of Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments: The Examiner agreed with the applicant's arguments that Cameron (US 5,560,655) does not disclose a spring loaded ball type capable of purging any air, other gases or moisture, which may be trapped within the inner chamber of the housing. The applicant's representative pointed out that Cameron's valve is used to inject a lubricant into the fitting but automatically closes to prevent reverse flow of lubricant , while the spring loaded ball type valve is a valve that permits fluids to come out of the sealed conduit system as described on page 7 lines 1-6 in the applicant's specification.
